

ABHAY PARMAR

AI ML ENGINEER

Ahmedabad, Gujarat | +91 9327162685 | abhayparmar647@gmail.com | github.com/abhayparmar2612

PROFESSIONAL SUMMARY

Entry-level AI and Machine Learning professional with hands-on experience developing practical projects in machine learning, deep learning, and generative AI. Skilled in Python, data preparation, model development, evaluation, and application deployment. Capable of turning real-world problems into reliable and easy-to-use AI solutions.

TECHNICAL SKILLS

Programming & Data: Python, SQL, NumPy, Pandas, Matplotlib, Data cleaning, EDA, Feature engineering

Machine Learning: Scikit-learn, Classification, Regression, imbalance handling, Cross-validation, Hyperparameter tuning, Model evaluation

Deep Learning: TensorFlow, PyTorch, ANN, CNN, RNN, LSTM, GRU, Autoencoders

Generative AI & Tools: Hugging Face, Prompt engineering, LLM fundamentals, Embeddings, RAG fundamentals, Vector databases

Deployment & Tools: Streamlit, FastAPI, Git, GitHub, Jupyter Notebook

PROJECTS:

Delivery Delay Prediction - Random Forest Regression, pandas, Feature-engineering, scikit-learn

- Developed a machine learning model to predict delivery delays based on order, distance, traffic, and operational factors. The objective was to help estimate delivery time more accurately and support better logistics planning.

Nova AI - LLM Chat Application - Python, Hugging Face Inference API, Streamlit

- Developed an AI-powered conversational application that allows users to interact with a large language model through a simple interface. The objective was to provide natural-language responses by integrating an LLM API with prompt handling and response generation.

Document Question Answering System using RAG - RAG, LangChain, Embeddings, vector DB, LLM API, PDF Processing, Streamlit

- Developed a Retrieval-Augmented Generation application that allows users to upload documents and ask questions based on their content. The system retrieves relevant document sections and uses an LLM to generate context-aware answers.

Customer Credit Risk Prediction using ANN - ANN, Numpy, Data preprocessing, Feature scaling, Tensorflow/keras

- Developed an Artificial Neural Network to predict customer credit risk using financial and demographic information. The objective was to help identify potentially high-risk customers and support better lending decisions.

Sales Forecasting using RNN - Time Series Processing, Feature Scaling, Sequence Modeling

- Developed a Recurrent Neural Network to forecast future sales using historical sales data and time-based patterns. The objective was to support demand planning and improve business decision-making through data-driven sales predictions.

Additional projects: Movie Recommendation System, Diabetes Prediction with ANN, Customer churn prediction, Loan Approval Prediction, AI Email Generator.

EDUCATION:

Bachelor of Computer Applications (BCA)

Chandigarh University, Punjab
